Results driven, Fast learning and team focused Senior Software Reliability Developer with 5 years of professional experience. **Proficient** in **Linux, C++, Python** development with a strong **Mathematics, Problem Solving** and embedded systems background. **Versatile** with a strong set of **collaborative skills in multicultural teams**. Always aiming towards high **Quality** and **performance** with a **mentoring mindset** targeted towards the continuous growth of the team. Proven expertise in the enhancement of robust automation and testing strategies using **Agile** methodologies and **CI/CD** pipelines.

PROFESSIONAL EXPERIENCE

Senior Software Reliability Developer

February 2026 — Present

Oracle, Guadalajara

Use and development of **solutions** in **Python, Java** and **Bash** with the use of **AI** for the building, configuration and management of regions in the **cloud**, with a focus on **automation** of tasks and fast **problem solving**.

- Use of **AI tools** on repetitive tasks for improving **efficiency** and information **scraping**, using it for a rapid ramp up by **processing** and **transcribing** information for easy access.
- **Clear documentation** and **test** creation of tools for management.

Functional Validation Engineer

February 2021 — February 2026

Intel, Guadalajara

Develop, implement and **debug** tests for hardware functionality verification using **Linux** and **Python**, help with the **planning** and **configuration** of **automated** tests while collaborating with a **multicultural** and **diverse team** from all around the world.

- **Bash** and **Python** scripts for hardware testing, **information scraping** and **automatic porting** with **PyTest**, using **Agile** principles with **CI/CD** pipelines on large code bases.
 - **Automated** a process that could take hours into a script that ran in minutes at least once a week.
 - Porting script helped migrating to new projects **saving up to a day** per port.
- Gain visibility with external teams within the company, being the **Point Of Contact** within my team.
- **Mentor, train** new employees and **teach** teammates using my knowledge by **researching** on the low level functioning of processors and memory features, with a focus on extra tools for **boosting efficiency**.
- Saved up to **50%** of testing time by **efficiently** mixing configurations and tests with **full coverage, managing, enabling** and **reporting** statistics using **PowerBI** and **Jira** for **data analysis, visualization** and **issue tracking**.

EDUCATION

Mechatronics Engineer

August 2015 — January 2021

Instituto Politecnico Nacional, Mexico City

I managed to be one of the **top** students in this prestigious institution with **effort, curiosity** and **creativity**.

Always focused on **teamwork** for the best outcome by **mediating** and **leading** when possible delivering **quality** projects **efficiently**. With documentation skills gained on my activities within an optimization algorithms team on my social service.

- **Python** projects for **Neural Networks, file** and **database processing, web scraping**, pages using **Flask** and **Selenium** testing.
- **MIPS** multi-cycle **System-Verilog** design and implementation with **UVM testbench** creation using **python** and **C++**.
- Simulation programs using **MatLab**.
- **Virtual reality** experiences using **Unity** and **blender** with **GPS** and accelerometer implementation.
- Hardware description and **PIC** advanced projects using **Verilog** and **Assembly** with **sensors** and **actuators** (VGA control, 4 octave piano, High power control circuits with sensors and cellphone communication).
- Electrical circuits with the conditioning of **sensors, filters** and **actuators** like an electrocardiogram, motor controllers and PLC systems.
- Part modeling and manufacturing using **SolidWorks** and **Autodesk Inventor**.

Mobility program

February 2019 — June 2019

Universiti Malaya, Kuala Lumpur

Learned from one of the most renowned universities in the world while acquiring and adapting my experience working, **communicating** and **leading** people with contrasting backgrounds and mindsets.

Learned to create **virtual reality** projects using **Unity**, a line follower robot using **Raspberry Pi**, an **AI** project with hand tracking for deaf language letter detection, and manufacturing/environmental engineering processes in international contexts.

SKILLS

Languages	Tools	Soft skills	
Python C/C++ Bash JavaScript Typescript Java Verilog Assembly	Linux Git/Github Docker AI Cloud Jenkins Embedded Systems	Leadership Adaptability Mentoring Communicative Responsible Committed Fast learner	Problem Solving Mathematics Testing Debugging Agile Creativity Critical thinking

COURSES

Advanced C++ Programming and Modern Practices	February 2026 — May 2026
Time Management Fundamentals	February 2026 — March 2026
Foundations of Agile Project Management	February 2026 — March 2026
Learning how to Learn, Oakland University	January 2025 — June 2025
Advanced Python, Universidad Marista	June 2024 — November 2024
Linux Essentials, Linux Professional Institute	January 2020 — April 2020
Mobile App Development, Google Activate	November 2019 — February 2020
Intel x86 Processor & Platform Architecture, MindShare	January 2022 — June 2022

EXTRA-CURRICULAR ACTIVITIES

Mexican Mathematics Olympiad, OMM, Mexico City Bronze award.	March 2013 — November 2014
Mexican Informatics Olympiad, COMI, Mexico City Participation award.	January 2014 — May 2014
Scout, Mexican Scout Association, Morelia Participation in altruism and teamwork oriented activities	January 2014 — August 2015
Robot war staff, IEEE university branch, Mexico City Staff in planning and organization of international event.	July 2018 — July 2020
Emergency Response Helper, ERUM, Mexico Provided help during the 2017 Mexico city earthquake	September 2017 — October 2017
